Abstract

The objectives of the Simulation is to showcase what can be done with humans in the simulation world and how they can role play to illustrate a lecture or a presentation, help administer an examination or help people practice a skill.

The simulation itself will be showing a physician interviewing a (simulated) patient with schizophrenia.

There will be a brief introduction before to give the opportunity to one of the participants to play the role of the physician interviewing the patient. If nobody volunteer, the participants will be able to observe the interaction role played by the presenters. The role play will be followed by a brief discussion and Q&A period.
